EDUCATION

The University of Texas at Austin — Austin, Texas
Master of Science in Computer Science — 2026 - Present (Expected 12/2027)

National Institute of Technology, Tiruchirappalli — Trichy, India
Bachelor of Technology (Honors) in Computer Science and Engineering — 2018 - 2022
GPA: **9.57**/10 | **Rank 1/119** | Institute Gold Medalist

EXPERIENCE

Google
Senior Software Engineer — Nov 2025 - Aug 2026
Software Engineer III — Nov 2023 - Oct 2025
Software Engineer II — Jul 2022 - Oct 2023

- Engineer on the **Prod RPCs team**, developing and maintaining Google's foundational Remote Procedure Call (RPC) stacks (Stubby & gRPC) which handle over **95% of Google's exabyte-scale network traffic**.
- Optimized Host Networking performance for **Cloud TPU training and inference workloads**. Achieved **~50–100% increase in network goodput** and improved reliability by implementing several vertical optimizations across the stack from tuning **XLA collectives**, a new **gRPC** transport, to **Linux kernel** level optimizations.
- Actively contributed to the open-source gRPC repository, landing a wide variety of changes including critical vulnerability fixes, performance optimizations, and telemetry improvments.
- Tech Lead for **Fathom**, driving TCP-layer visibility for high-performance workloads; external contributions included upstreaming Linux Kernel telemetry patches and identifying/fixing a **TCP Fast Open (TFO)** bug in mainline.
- Led a strategic 2-year **Technical Debt Reduction** initiative to eradicate a legacy streaming protocol, modernizing the fleet's communication stack.
- Overhauled RPC benchmarking infrastructure, reducing performance test flakiness from **~10% to under 2%**.

Samsung R&D Institute
PRISM Research Intern — Aug 2021 - Mar 2022

- Engineered a **Multi-Attribute Aware Knowledge-Graph** based recommendation system for mobile applications using **Graph Convolutional Networks (KGCN)** in PyTorch.

SWE Intern — May 2020 - Jul 2020

- Developed a novel **Blockchain Simulator** in Python to model and analyze protocols based on **Directed Acyclic Graphs (DAGs)**.

Arcesium — Jun 2021 - Aug 2021
SWE Intern

- Architected, developed, and tested a unified, configuration-driven search framework from the ground up, **reducing the time to deploy new search functionalities by 20x**.

SKILLS

Languages	C, C++, CUDA, Python, Java, Rust, SQL, TypeScript
Technologies	gRPC, Protocol Buffers, Linux TCP/IP Stack, PyTorch, TensorFlow, Jax, Triton, XLA
Areas of Interest	ML Infra, Networking, Systems, Kernel Development, Machine Learning, LLMs
